

Power BI Interview Questions and Answers (Fresher Level)

1. What is Power BI?

Power BI is a business intelligence tool developed by Microsoft used to connect, transform, and visualize data to create interactive dashboards and reports.

2. What are the main components of Power BI?

Power BI Desktop, Power BI Service, Power BI Mobile, Power BI Gateway, and Power BI Report Server.

3. What are the building blocks of Power BI?

Datasets, Reports, Dashboards, and Visualizations.

4. What is a dashboard in Power BI?

A dashboard is a single-page view in Power BI Service that displays key metrics and visuals from multiple reports.

5. What is the difference between a report and a dashboard?

A report contains multiple pages of visuals based on a dataset, while a dashboard is a single-page summary of important visuals.

6. What is DAX?

DAX (Data Analysis Expressions) is a formula language used in Power BI to create calculated columns, measures, and custom calculations.

7. What is the difference between a calculated column and a measure?

A calculated column is computed row by row and stored in the table, while a measure is calculated dynamically based on filters in a report.

8. What is Power Query?

Power Query is a data transformation and cleaning tool used in Power BI to prepare and transform data before loading it into the model.

9. What is Row Level Security (RLS)?

RLS restricts data access for different users so they can only see the data relevant to them.

10. What are slicers in Power BI?

Slicers are visual filters that allow users to filter report data interactively.

11. What is data modeling in Power BI?

Data modeling is the process of creating relationships between different tables to organize data for analysis.

12. What is Import Mode in Power BI?

Import mode loads data into Power BI memory for faster performance.

13. What is DirectQuery?

DirectQuery connects directly to the data source and queries data in real time without storing it in Power BI.

14. What are KPIs in Power BI?

KPIs (Key Performance Indicators) measure progress toward business goals using metrics and targets.

15. What is a workspace in Power BI?

A workspace is a collaborative environment in Power BI Service where teams create and manage reports and dashboards.

16. What is Power BI Gateway?

Power BI Gateway connects on-premise data sources to Power BI Service for scheduled refresh.

17. What is conditional formatting?

Conditional formatting highlights data in visuals using colors or icons based on conditions.

18. What is a relationship in Power BI?

A relationship links two tables using a common column to combine related data.

19. What is a data source in Power BI?

A data source is where the data originates, such as Excel, SQL Server, or cloud services.

20. How do you optimize Power BI performance?

Reduce unnecessary columns, use proper data modeling, avoid complex visuals, and use measures instead of calculated columns when possible.
